# Clearwater PTZPC

The Clearwater PTZPC is a new way to outfit your visual communications space. Uniting the award-winning Compass camera with the latest Intel Processor.

VDO360 has solved one of the most vexing issues facing the design of these spaces – where and how to run the cabling. No more worrying about the path the USB cable is going to run – the camera and computer are actually a single unit.

This breakthrough device is smaller than most USB PTZ cameras alone, and at a price less than most of those cameras as well.

The Clearwater System consists of a custom-

designed Compass camera integrated directly to a fully configured Intel fifth generation i5 PC and mount, a Harman/Kardon Esquire II speakerphone, and one of our new Flare IR preset recall buttons, and of course, a wireless keyboard as well as the IR remote for camera control.

With the use of WiDi (Wireless Display) capabilities, the Clearwater system can be configured to be completely wireless with the exception of power to the PTZPC.

And we were very picky when it came to

choosing just which computer we wanted to pair our camera with. The NUC5i5MYBE motherboard has full 4k support out of the dual display ports. We install the 8GB of Ram needed for smooth operation, a solid state drive for rapid boot times and the latest full spectrum Wifi/Bluetooth radio. This first, purpose designed Intel Unite hub also comes loaded with Intel Remote Keyboard. Full vPro compatibility means your IT group will have no problem with putting this system on your network. And not the least – full Pro-WiDi support for the utmost in security.
