

SMARTER CONFERENCE ROOMS. SMARTER MEETINGS.

Every minute counts. Today's business world needs smarter meeting spaces—conference rooms that ensure that meetings start on time and that connect workers from any location to improve productivity.

What Is Intel® Unite™ Software?

Intel® Unite™ software powers secure, connected meeting spaces; whether your workers are sitting around the table or halfway around the world, you can get started quickly. This easy-to-use solution improves collaboration for users while simplifying management for IT with powerful Intel technologies.

- **Intel® Core™ vPro™ processor-based mini PC** – The latest Intel Core vPro processor delivers leading-edge security and performance together with innovative wireless capabilities. The foundation for Intel Unite is a conference room with select Intel Core vPro processor-based mini PCs.
- **Intel Unite software** – With Intel Unite software running on client devices, attendees can connect and interact with meeting content in real time, from any location.

Get Meetings Off to a Fast Start

With a select Intel Core vPro processor-based mini PC in the conference room and the Intel Unite application on client devices, on-site and remote workers can connect to the meeting quickly and wirelessly.

Lose the Wires

Technology connects attendees to new or existing displays, projectors, and interactive whiteboards. There's no need to waste time searching for the right adapter or dongle.

Collaborate in Real Time

Attendees from any location can view, annotate, and share documents—in real time, every time. When the meeting ends, they can distribute content using the built-in file transfer feature.

Share Screens Instantly

With one Intel® Core™ vPro™ processor-based device running the Intel Unite™ application, workers can share screens wirelessly with peer-to-peer sharing.¹

Simplify IT Management

With Intel vPro technology, you can integrate the Intel Unite software into your existing IT infrastructure and leverage the management tools, systems, and policies you already have in place.¹ And by simplifying the infrastructure technologies needed in your conference rooms, you can help reduce costs and improve manageability.

Safer Meetings

To improve security, attendees must enter the appropriate rotating PIN code to join the meeting. You can allow guests outside of your network to attend, or let them use the Intel® Unite™ software features without joining your network.

Protected Data

Enterprise-grade security ensures that data is 256-bit Secure Sockets Layer (SSL) encrypted and stays within your corporate network. Data always stays within the virtual walls of your business and isn't dependent on any additional vendor solutions.¹

Remote Manageability

With the remote management tools of Intel vPro technology, you can manage all conference room PCs from any location to complete basic tasks, apply patching, or make repairs. And you can do it all with an easy-to-use admin portal.

Unite Your People, Solutions, and Platforms

The Intel Unite software connects all workers easily and securely with smart meeting spaces. Future capabilities will build on new innovations, including:

- **In-room controls** – Manage controls such as in-room lights, speakerphones, cameras, and temperature, and work with telepresence and meeting-room calendar integration to simplify scheduling.
- **Multiple operating system support** – Gain current support for Windows* and Mac* OS X* operating systems, with additional clients such as the Android* platform, the Google* Chrome* browser, and iOS to be added in the future.
- **Greater choice** – Get a single, unified experience when using Intel Unite software with conferencing solutions like Microsoft* Lync* or Cisco TelePresence*, including the ability to choose the hardware, software, and conference room platform.
